

Context/Background for Lesson:

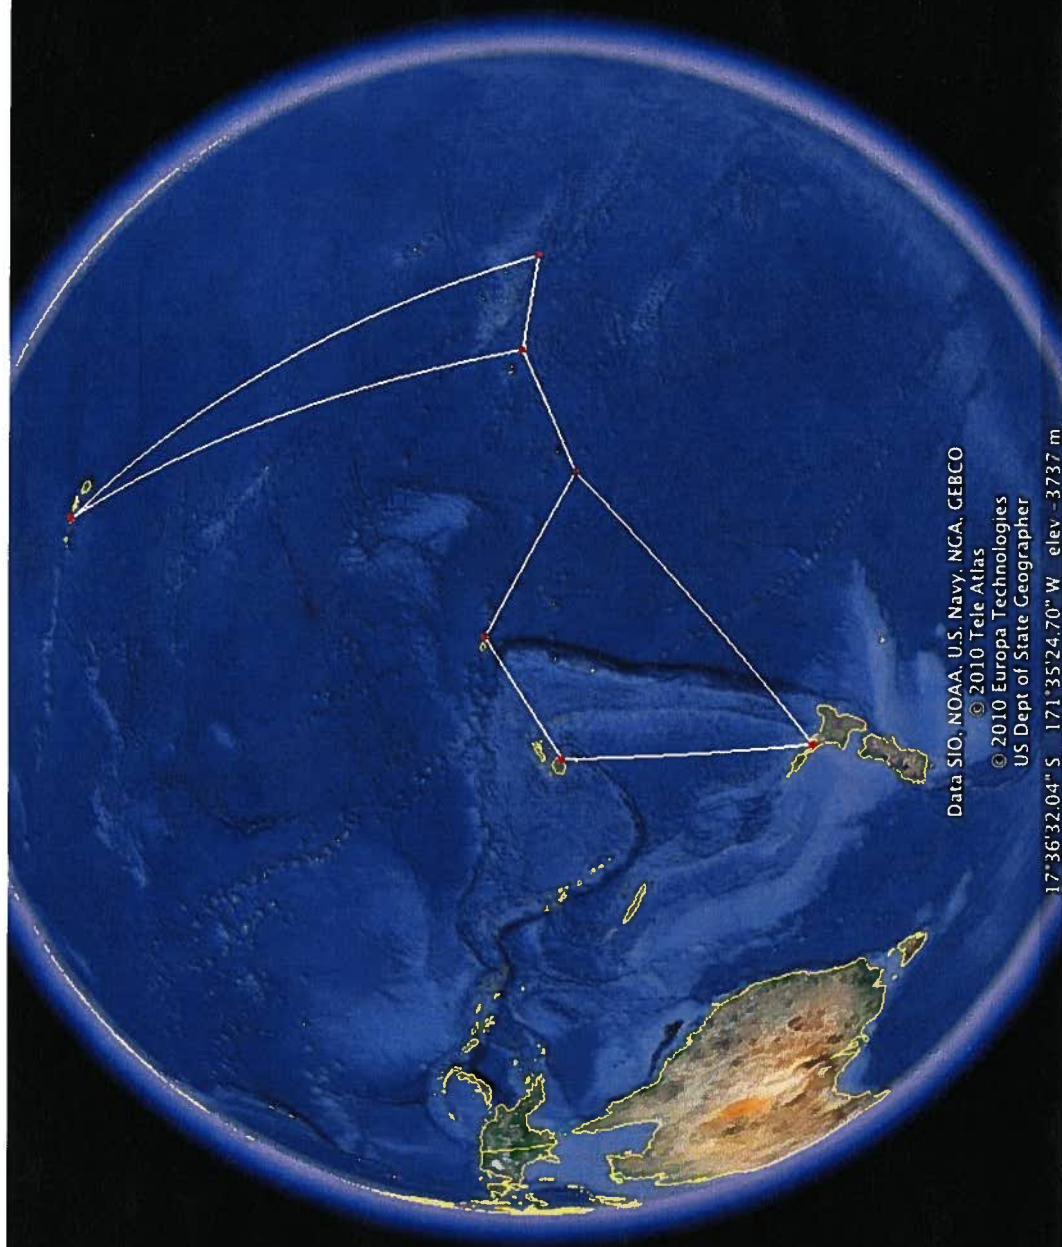

- 25 third graders

Goals of the Activity/Outcomes

- be able to locate the various island groups in the Polynesian Triangle that Hokule'a traveled to in their Voyage of Rediscovery
- to see it in 3D

Programs Used: Google Earth

Reflection: The students loved it when the Earth rotated and they could really see how it all works. Google Earth also calculates the mileage between islands, so we were able to do lots of math as well as find the islands. We were also able to find the places that we had heard about in our songs that we were learning--it started to all fit together.
